I would like you to answer the following questions in a short answer format using Markdown.	

Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
2. Use **bold** and *italic* text for emphasis in your responses.

GitHub Username: Team name: Today's date:

What tools have you we worked with so far in this class?

- GitHub
- Cloud9
- Jekyll
- Pandoc
- Unix

Which have you found most potentially useful?

GitHub

Why?

It is immensely helpful to have commits and changes simply and easily displayed in GitHub.

What tools have been the most difficult to learn?

Unix, **definitely** Unix.

Why have they been particularly difficult to learn and use?

Because the only programming I had ever done had been in PHP so none of the terms we used or tasks we were performing initially made any sense to me.

What tools would you like to learn more about?

I would like to learn more of the capabilities of GitHub primarily because I love the *collaborative purpose* of the application.

When you are finished with the questions in file:

1. I want you to change the name of the file to your GitHub username.

2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
